

EARTH SEQUENCING

use splice from astronomically age calibrated, single-site, highest resolution records, instead of stack of multi-site low resolution → minimises age model uncertainties, individual records shifted according to basinal offsets. Allows time-evolutive view of forcing–response relationship.

First steps towards an astronomically calibrated Cenozoic $\delta^{18}\text{O}$ megasplice

De Vleeschouwer, D., Vahlenkamp, M., Crucifix, M., & Pälike, H. (2017). Alternating Southern and Northern Hemisphere climate response to astronomical forcing during the past 35 m.y. *Geology*, (4), G38663.1. <https://doi.org/10.1130/G38663.1>

This project receives funding from the European Union's Seventh Framework Programme for research, technological development and demonstration under grant agreement 617462 from 2014–2019.
